Libraries needed for exercises

For all the exercises you will need to use the Bootstrap 4 framework where the necessary css and js libraries are used as we have already seen in class.

It is recommended that you use a *div* container for your whole *body*, in which you can use the class *container* or *container-fluid* as explained in theory.

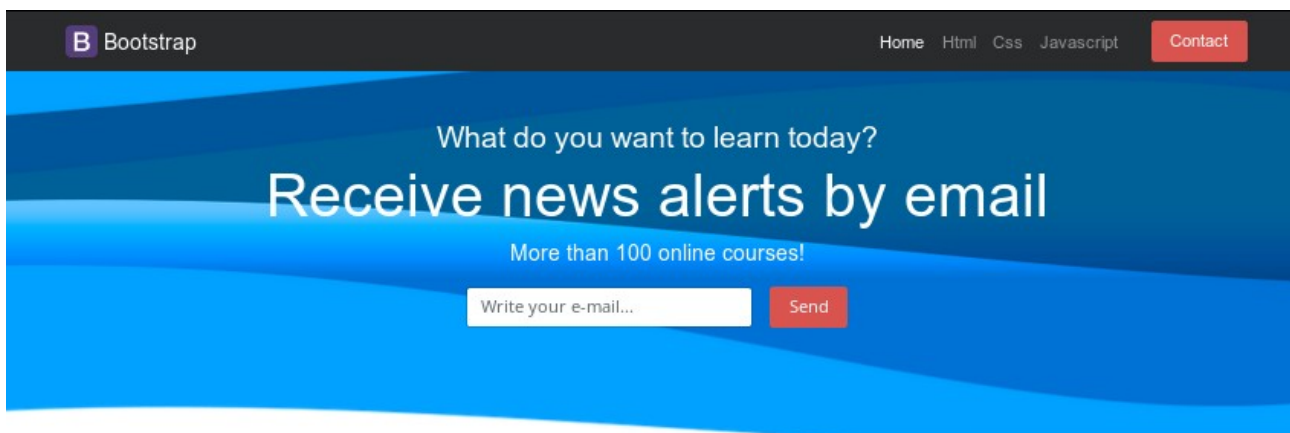

All your new CSS has to be developed using SASS. Use variables, loops, placeholders, and all you need from SASS.

To check out the screen sizes you better have a look into
<https://getbootstrap.com/docs/4.0/layout/grid/#grid-options>

After finishing the exercise, call the teacher to check to your activity.
